

Avira Management Console (AMC)

Network-wide security management from a single console

The Avira Management Console (AMC) lets you manage your Avira security solutions from any PC in the network, whether you have 2 or 8,000 computers connected.

Central administration means so much more than convenience. Using the AMC can lead to a considerable improve-

ment in your ability to react to malware attacks. It also lowers operating costs and promotes closer compliance with your organization's security directives.

Implementing Avira's award-winning virus protection was never so easy or cost-effective.

Why Use the Avira Management Console (AMC)?

Optimal Safety

Better security in less time

Central installation of all supported Avira products from the AMC software repository.

The latest security across the network

Central and automatic updating of supported software packages and AMC components with Avira Update Manager.

Spot trouble a mile away

Automatic filtering and display of computers that do not comply with security directives.

Real-time security monitoring

The event manager provides a complete overview of your network's security status and sends alerts and email warnings.

Helps find your security weak points

Informative, highly configurable reports, statistics and condition-based views provide insights into your network's security.

Test it first

Updates can be run in test mode before they are committed automatically or manually to the share directory.

Configurable authentication methods

Optional SSH public key authentication can be enabled for agent installation.

SSL-encrypted communication protocol

Communication between individual computers and the AMC is protected. Multiple SSL certificates can be used for stronger security.

Customizable user privileges

User management includes password requirements and general or group-based access rights.

Easy to Configure and Manage

Simple, intuitive user interface

The system is managed and configured fast through a user-friendly interface based on Microsoft Management Console.

Launch it fast

Simple creation of the security environment by drag and drop, computer lists or ADS/LDAP import.

Stay organized

Free definition of hierarchical groups to map organizational units.

Customizable alerts

Alert management with freely definable rules for individual notification.

Maintain uniformity across the network

Central, network-wide updating of all AMC components and Avira program packages and for local mirroring of product and security updates.

Roaming IP support

Automatic grouping of new and existing computers based on IP addresses, networks and ranges.

Active Directory synchronization

The synchronization of the AMC security solution with Active Directory can be initiated automatically at regular intervals to add new computer objects in the management or delete old ones to free used Avira licenses.

Faster updates via multiple update servers

It is possible to create several update servers that can be assigned to individual groups.

DHCP support

Support for computers with dynamically allocated IP addresses.

"Silent setup" support

Unattended installation can be performed for AMC agents in the network.

Preserves Your IT Budget

Free with all supported products

The AMC is included with almost all business products.

Extremely low administration overhead

“Set and forget” configuration and automatic updating saves time and reduces the chances of administrator error.

Intuitive operation saves you time, effort and expense

No need for expensive training or technical education.

All-inclusive

Free updates and free upgrades included with every active license.

Transparent licensing

No hidden costs or essential extras not already included with the product.

Won't stress your systems

Our fast, resource-saving technology reduces the load on hardware so it can last longer.

Sets Your System Administrators Free

Do it all in one place

Remote installation, configuration, updating and uninstallation of Avira software on all network computers.

Automatic software deployment to new PCs

Automatic installation of an Avira product on every computer added to the security environment in line with security directives.

Task scheduling

Scheduler for individual scheduling of routine tasks (at intervals ranging from once to monthly).

Offline computers don't miss updates

Automated tasks can be saved for the next boot-up if a machine is offline.

ADS/LDAP synchronization

Automatic synchronization of the security environment with ADS or LDAP.

Rapid deployment of settings

Properties and configurations can be distributed to computers or groups of computers by “bequeathing” (e.g., scope of search).

System Requirements

AMC Server:

- Windows Server 2003 (x32 or x64) newest SP
- Windows Server 2008 (x32 or x64)
- Windows Server 2008 R2 64-bit.

AMC Frontend:

- Windows XP (x32 or x64)
- Windows Vista (x32 or x64)
- Windows 7 (x32 or x64)
- Windows Server 2003 (x32 or x64) SP1
- Windows Server 2008 (x32 or x64)
- Windows Server 2008 R2 64-bit

AMC Agent:

- Windows XP (x32 or x64)
- Windows Vista (x32 or x64)
- Windows 7 (x32 or x64)
- Windows Server 2003 (x32 or x64) SP1
- Windows Server 2008 (x32 or x64)
- Windows Server 2008 R2 64-bit
- Linux (glibc 2.2)
- Sun Solaris SPARC 9 and 10
