

Send large files easily, securely and 'cloudless' with FileCap!

Your employees use cloud services like WeTransfer or YouSendIt to send large or sensitive files. They often do not realize that these files are sent into the cloud unsecured. This can be a threat to your organization! **Starting today, use FileCap to send large files safely and 'cloudless'!**

Get started with the FileCap Outlook add-in

- Send emails the way you're used to, but now with attachments up to **10 GB** or more!
- Large attachments no longer take up all your inbox space!
- Use Outlook to invite people outside your organization to send **you** files safely with FileCap.

Discover the FileCap user friendly web interface

- By using the FileCap portal, people outside your organization can send **you** large files.
- Use a password for additional security.
- Download files separately or all at once in a ZIP file.

Maximum security and optimal usability, all-in-one.

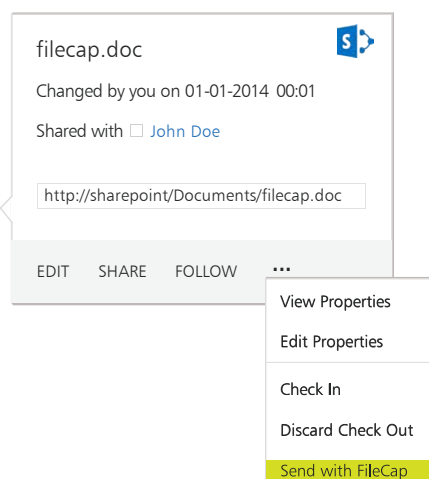

By using FileCap, you can rest assured that your files are only available to the intended recipients. FileCap uses advanced encryption methods for sending your files. Your files are encrypted and stored on your own server, within your own secured network.

More opportunities, the same ease of use

FileCap is continuously developing new features, based on the input of our customers. Does your staff use tablets or smartphones for work purposes on a regular basis? The new FileCap app provides mobile devices with the most important FileCap features. Furthermore, FileCap developed an add-in for Sharepoint.
