SecureSafe

The secure cloud solution
for your company

Secure file sharing for your company

Use our uniquely secure team safes to store, share and sync files with your team, company or organization. Open as many team safes as you need to share files with different teams, customers or external partners. Safely invite members to your safes using a one-time security code and assign different user rights to each member. With the integrated activity journal and email notifications, you stay up to date on important activities in each of your team safes.

Protect files you send to partners and customers

With the SecureSend feature you encrypt and send files of up to 2 GB in size to any recipient of your choice. The recipient does not need a SecureSafe account to download the files. This means that you can send any business sensitive documents to external partners or customer that do not use SecureSafe with ease of mind.

Password generator with automatic security check

Our integrated password manager ensures reliable password protection, preventing any misuse. The built-in password generator suggests strong passwords and informs users whether or not a newly created password is secure. Together with our long-term partner, Zurich University of Applied Sciences (ZHAW), we have developed a method for creating strong passwords, which are nonetheless easy to remember.

Enable a simple, secure workflow

Do members of your team need to view business-sensitive data while on the go? With SecureViewer, they can open and view PDFs and images without leaving any digital traces on the used device. Need to add comments or a digital signature to a document before sharing it with a partner or client? Simply use our PDF annotations tool, which work on Android and iOS devices alike.

Data Inheritance in case of emergency

Data Inheritance helps surviving dependents to manage important digital documents and login data, which belonged to the deceased. Business partners make use of Data Inheritance in order to grant their professional partners access to sensitive documents or to pass on information about vital business processes, should something happen to them.

Safely sync your business files

Sync shared files to grant all team members access to the latest version of any file at all times. Our secure synchronization software enables you to encrypt business files on each of the devices you sync to so that only authorized people can access these. Through the automatic storage of earlier document versions, all file edits remain traceable. This is the safest, simplest way to collaborate on business files.

What makes SecureSafe uniquely secure?

We guarantee high-level security through internationally recognized encryption methods, triple redundant data storage and strong user authentication. SecureSafe relies on two certified data centers, which fulfill the requirements of the Swiss Financial Market Supervisory Authority FINMA. One of the data centers is located in a former military bunker deep in the Swiss mountains.

About DSwiss AG

The SecureSafe online file storage system was developed in 2008 by the Swiss company, DSwiss AG. The company is a renowned and leading provider of highly secure digital services, with its headquarters based in Zurich. DSwiss' client portfolio includes numerous banks, insurance companies and security service providers.
